

Assessment Cover Sheet

Assessment Title	Research Paper		
Due Date	25 th May 2026	Course Code	EN8914
Course Title	Final Year Project		
Internal Moderator's Name	Dr. Belal Elsayed		
External Examiner's Name			

Instructions:

1. This cover sheet must be completed (section in red below) and attached to your assessment before submission in hard copy/soft copy.
2. The time allowed for this assessment is till **25th May 2026**.
3. This assessment carries 10 % marks and assessing CILO 1, 2, 3, 4, 5 and 6.
4. The integration of AI tools and resources is encouraged to enhance learning and understanding of core theories and principles. AI-generated content, such as videos and web resources, may be utilized for brainstorming sessions and comprehensive exploration of material science concepts, provided their use adheres to ethical guidelines and academic integrity standards.
5. References consulted (if any) must be properly acknowledged and cited.

EN8914 Final Year Project – Research Paper (10%)

1. Assessment Description

This assessment requires you to condense your final year project into a high-quality, formal research article, mimicking a submission to a peer-reviewed engineering journal or conference. The paper must be a maximum of **6 pages**, strictly formatted according to the **IEEE conference template** which is available on Moodle.

The purpose of this task is to develop your ability in scholarly communication, forcing you to articulate your work with precision, conciseness, and a focus on its original contribution. You must effectively communicate the project's context, innovative methodology, key findings, and validation data to a specialized technical audience, emphasizing the originality and significance of your work.

Note on Group Projects: Irrespective of whether the project is conducted individually or as a group, a single research paper must be submitted for assessment. For group projects, all group members must be listed as co-authors on the paper. The supervisor and co-supervisor (if applicable) should also be included as authors, in accordance with standard academic practice for research originating from their supervision. The paper must represent the integrated work of the entire team while clearly denoting the collective contribution.

2. Research Paper Structure & Content Guidelines

The paper must adhere to the standard structure of an IEEE-formatted research article. The recommended distribution of content across the 6-page limit is suggested below:

1. Title, Author(s), Affiliation, Abstract:

- **Title:** Must be a maximum of 15 words. It should be concise, specific, and descriptive, accurately reflecting the paper's content and including key terms for discoverability (e.g., not just "Final Year Project").
- **Abstract:** A powerful, sub-250-word summary of the problem, method, key results, and conclusion, including the value proposition.

2. Introduction:

Establish the context, the complex engineering problem, and its significance. Clearly state the problem statement, the project's aims and objectives, and provide a brief summary of the paper's structure.

3. Literature Review / Background:

Provide a focused, critical review of the most relevant existing work. Clearly identify the research gap that your project aims to fill and state your project's originality and innovation. (*this section can be embedded in the introduction as well*)

4. Methodology:

Describe the methods, materials, and procedures with enough detail for reproducibility. Justify your design choices and highlight the integration of digital technologies and

a multidisciplinary approach. This section should clearly illustrate the "practical application" (e.g., simulation, prototype).

5. **Results & Discussion:** Present key findings objectively using figures and tables. Immediately interpret these results, linking them back to your objectives and the literature. Discuss the performance, validation, and limitations. This section should seamlessly blend results with their meaning.
 6. **Business Model & Commercial Viability:** Include a dedicated subsection that succinctly presents the proposed business model, market entry strategy, and sustainable competitive advantage, justifying the project's commercial potential.
 7. **Conclusion & Future Work:** Provide a strong, conclusive summary of the work and its achievements. Explicitly state how the objectives were met and provide specific recommendations for future research and development.
 8. **References:** A complete list of all cited sources, formatted strictly in IEEE style.

EN8914-Research Paper - Marking Rubric (100 Marks)

Student Name and ID: _____

Supervisor Name: _____

PART A: Core Technical & Structural Content (50 Marks)

CRITERIA	POOR (0-59%)	GOOD (60-69%)	VERY GOOD (70-84%)	EXCELLENT (85-100%)	MARKS
TITLE & ABSTRACT (5)	Title missing/generic. Abstract missing/ineffective.	Title vague. Abstract incomplete or vague.	Title clear and specific. Abstract adequately summarizes key elements.	Title is compelling and captures innovation. Abstract is a powerful, stand-alone summary.	/5
INTRODUCTION & PROBLEM DEFINITION (8)	Context/problem unclear. Objectives undefined.	Context/problem lack impact. Objectives are not SMART.	Context, problem, and objectives are clearly stated and motivated.	Problem is compellingly established, highlighting significance. Objectives are perfectly framed.	/8
LITERATURE REVIEW & BACKGROUND (7)	Superficial or missing review. No research gap identified.	Descriptive list of sources. Research gap is vague.	Critical review of literature. A clear research gap is identified.	Sophisticated synthesis of literature. A compelling research gap is established.	/7
METHODOLOGY & TECH. DESCRIPTION (10)	Methods poorly described, not replicable. Practical application unclear.	Methods lack detail or justification. Application mentioned but unclear.	Methods are clearly described and mostly replicable. Application is clear.	Methods are precise and replicable. Choices expertly justified. Application is well-integrated.	/10
RESULTS, DISCUSSION & VALIDATION (10)	Results poorly presented. No discussion/analysis. Validation absent.	Results lack clarity. Discussion superficial. Validation is weak.	Key results are clear. Discussion interprets results and links to objectives.	Results presented with exceptional clarity. Discussion is insightful and critical. Validation is robust.	/10
BUSINESS MODEL & COMMERCIAL VIEW (5)	Commercial viability not addressed.	Business model mentioned but lacks plausibility/detail.	A coherent business model and market analysis presented.	A viable, well-justified business model. Compelling analysis of competitive advantage.	/5
CONCLUSION, FUTURE WORK & IEEE FORMAT (5)	Conclusion missing or weak. Does not follow IEEE format or page limit.	Conclusion restates work. Major deviations from format. Page limit exceeded.	Conclusion summarizes achievements and future work. Mostly adheres to format and page limit.	Strong, conclusive summary. Strictly adheres to IEEE format and page limit.	/5

Subtotal for Part A: **/50**

PART B: Publication Readiness & Scholarly Rigor (50 Marks)

CRITERIA	POOR (0-59%)	GOOD (60-69%)	VERY GOOD (70-84%)	EXCELLENT (85-100%)	MARKS
ORIGINALITY & NOVELTY (15)	Work is entirely derivative; no claim or justification of novelty.	A minor incremental advance is claimed. Novelty is weakly supported by comparisons.	A clear original contribution is identified and well-argued against the background literature.	The paper makes a compelling, significant, and well-evidenced claim for a novel contribution to the field.	/15
SCHOLARLY & ACADEMIC WRITING (10)	Language is informal, unprofessional, or difficult to understand. Frequent grammatical errors.	Language is clear but simplistic or occasionally informal. Some grammatical issues.	Writing is professional, clear, and technically precise. Minor errors do not impede understanding.	Writing is concise, precise, and authoritative. Demonstrates mastery of technical terminology and academic style.	/10
DATA PRESENTATION & VISUALIZATION (10)	Figures/tables are missing, irrelevant, or of very low quality. Captions are missing or uninformative.	Figures/tables are included but poorly designed (e.g., small text, unclear labels). Captions are basic.	Figures/tables are clear, appropriately labeled, and support the narrative. Captions are descriptive.	Figures/tables are publication-ready: high-quality, self-explanatory, and effectively highlight key findings. Captions are comprehensive.	/10
PUBLICATION POTENTIAL & IMPACT (10)	The work has no discernible impact or audience. It is purely descriptive with no forward-looking perspective.	The potential impact is mentioned generically. The audience for the work is implied but not defined.	The significance and potential impact on the field or practice are clearly stated. A target journal/conference is plausible.	The paper convincingly argues for the significance and broad impact of the work. It is clearly structured for a specific, high-quality publication venue.	/10
ARGUMENTATION & CRITICAL THINKING (5)	Paper is a descriptive report. No critical analysis or synthesis. Claims are unsupported.	Some attempt at argumentation, but logic may be flawed or claims are weakly supported by evidence.	Presents a coherent argument throughout. Critically evaluates own work (limitations, choices) and supports claims with evidence.	Demonstrates sophisticated critical thinking. Builds a persuasive, evidence-based narrative. Explicitly weighs alternatives and discusses implications.	/5

Subtotal for Part B: **/50**

FINAL TOTAL (Part A + Part B): **/100**
